

Hallo scientists of the world, the time to change radically the world's economy has come and the change will be driven by a new approach to the energy systems, all around the world.

For me, and for those involved in the technical leadership of this energy change, it is a huge responsibility, because the corruption and the giant economical interests have already, in the past (and in a past not so far), suppressed initiatives like this one.

The risk, as you can easily understand, is very high, especially for our personal safety but, as in every global revolution, there is no success without sacrifice (I hope that this will be an exception).

I decided expressively to use simple words to expose a complex scenario because it is my intention to touch each of you in its intimate: the time will come to descend in details.

This is the base concept: a century ago, more or less, an illuminated man, known by most of you, Nikola Tesla, made some exceptional discoveries in the field of electricity; at his time the first suppression arrived in the person of the J.P.Morgan who, being a powerful banker, has had all the instruments to blind the Nikola's ideas and to make the adequate disinformation in the scientific environments of his age.

The Maxwell equations have been also truncated so, nowadays, in every academic institution, nobody can learn how to manipulate the energy in the correct and advantageous way.

In a previous publication of mine, I shared a very important PDF document where there are clearly exposed many inventions and patents which explain how the "principle of the conservation of the energy" is only partially true and how to extract free-energy from the surrounding environment in an easily and cheaply way.

I received no feedback from the scientists who downloaded that document; nobody told me to have been found, in the publication, any brilliant and revolutionary idea to be freed from the slavery of the big oil/energy companies...

Are you serious? Are you scared? Are you lazy or what?

I have a nice family, with three beautiful kids and a lovely wife: at the time I'm writing this document I'm scared a lot because I'm risking to lose everything I have, everything I've built in my life. Everybody of us have to die, sooner or later but the way it will happen makes the difference, and I hope to decrease in the better way (as late as possible) but ONLY after have shared this with all of you:

THE OVERUNITY HAVE BEEN DISCOVERED and it is so simple to implement that it's a real disgrace to do nothing!

The overunity (or C.O.P, Coefficient Of Performance > 1), for clarity, is the principle which states that, in an energetic system, there is more power OUT than the power IN.

This, apparently, is impossible and, again apparently, violates the principle of conservation of energy: this is true in a closed system, but it is wrong in an open one. We don't live in a closed system but we're used to see it as a closed one.

Our academic institutions taught us that it is closed, closing at the same time our minds.

Consider this: an electromagnet (a simple solenoid with an iron core) transforms the electric energy in a magnetic flux, simply applying an electrical potential to the terminals of the solenoid (made of a enameled copper wire, usually wrapped in a circular fashion, many times); when the potential is shortly removed, the magnetical field created at the trigger time collapses almost instantaneously, trasforming itself in a new electrical potential but many times higher than the one fed initially into the solenoid. This is called BACK-E.M.F. (feedback Electro Motive Force) and it is well known by all of electric technicians and engineers, it's a base of the electromagnetism.

This phenomenon is frequently unwanted due to the damages that can occur on electronic circuits when they receive the high voltage spikes from the collapsing field so, in modern electronics, we tend to suppress these spikes with electronic components (like diodes, TVS, and so on) to preserve the rest of the circuit. So, practically, we vanish an enormous potential which should be, instead, harvested and re-used for energy savings or to produce "fresh" energy.

In a transformer, usually made by two solenoids, this phenomenon is highly amplified because, detaching the potential from the primary side, the magnetic field collapses on both solenoids, the primary and the secondary one, giving a twin back-emf and, depending on the transformer ratio, it can reach impressive values, even if you're using a simple and mini audio transformer: the order of magnitude, at the secondary side, can be thousands of times higher than the initially applied voltage!

And this is not the end of the game... the magnitude of the back-emf is frequency dependant so, applying a PWM (Pulse Width Modulation), usually in a shape of a square wave, as the input of the transformer, we will have spikes which will be proportionally greater in function of the frequency.

To me, it is still unclear why, applying an initial potential to a solenoid it creates a magnetic field which, collapsing, returns much more potential...a physic could for sure explain this...perhaps not.

My idea is that the magnetic field, once created, extends its limits in an unknown space which many call it "vacuum" o "zero point energy" or "quantum space" or "radiant space", interacting with many particles, mainly ions and, at a collapse time, it captures the charge of these particles, giving them back as an electric potential.

This is a speculation, not a statement.

Well, let's go back to the harnessing of back-emf in shape of high voltage spikes: how to collect and transform them as an energetic advantage for us?

The capacitors are electronic components able to store electric charges (our high voltage spikes are plenty of electric charges) so we can use these components to store the spikes but, unfortunately, we have to fight with the Lenz's law: when a load is applied to the transformer's output terminals (and our capacitors are a significant load) most of the potential is dispersed in different kind of losses, leaving only a part of the energy to be stored in the capacitors.

This is anyway a great result and can be enough to produce a large amount of power for "free" which can be used for our purposes (adequately transformed via an inverter).

If anybody want to go further and harvest all the potential given by the back-emf, overcoming the Lenz's law, there is more... the magnetic "multi-path", or "parallel path" discovered by Edward Leedskalnin, which involves three solenoids which exchange the magnetic flux in a so particular way that the potential is fully transferred without any losses: this is possible only nowadays because there is the need of a particular material called nanocrystalline nickel alloy as a core of the three solenoids and, for the best results, enameled coated silver wire is highly recommended (even if not mandatory).

You can find every single detail on Youtube, you can also discuss the details directly with me (hoping I will be still alive after this publication).

For the back-emf researches search for "back-emf overunity" on Youtube.

For the parallel path and the overcoming of the Lenz's law, search for "Bi-toroid" on Youtube.

Publishers on Youtube which are NOT fakers and constantly discover new things in the overunity fields are:

Marc Belanger
Thane Heins
overunitydotcom
ZeroFossilFuel
TheOldScientist
RWGResearch
skycollection
theenergydream
emc4u2
PMMG4HYBRID
ABHA COIL

Then there is a network called PESN (Pure Energy System News) and a web site, overunity.com where you can find and discover a lot.

Concluding, as I previously specified, I'm NOT an electronic engineer but a modest technician with a passion on electronics and a fanatic of the free-energy philosophy.

I really believe that we have the power to make the change, right now, with a very low effort and almost no money but this is a revolution which will dramatically subvert the world's economy but will project all of us in a new human dimension.

Unfortunately, it will disturb a lot of many bad people which base their life on the exploitation of other's lives so I'm risking a lot publishing this but... *alea iacta est!*

I had to, in my consciousness, to inform you – the scientists – that there is a truth far from the one you were confident with and if we will be many, following this ideal, we'll success.

GOD bless you all (even those who don't trust GOD, of course)

Fabrizio
